EatNmove

TRACK · FUEL · RECOVER · GROW

Do you know what today's plate added up to?

Most of us do not. One day of it changes nothing. Years of it change a great deal.

Why count at all?

47%

We misjudge what we eat

In a controlled study, people who believed they were eating little were in fact eating 47% more than they reported, and overstated their activity by 51%.

Lichtman et al., N Engl J Med, 1992

~4 kg

Small extras add up

An extra 100 kcal a day, kept up, ends as about 4 kg more body weight. About half of it arrives within a year.

Hall et al., The Lancet, 2011

4 in 10

It is already common in India

Among adults, 39.5% have abdominal obesity, 28.6% generalised obesity, and 11.4% have diabetes.

ICMR–INDIAB-17, Lancet Diabetes Endocrinol, 2023

22 studies

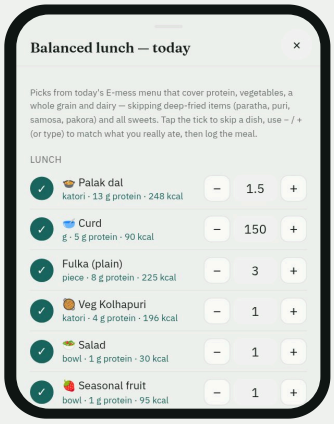

Keeping track goes with results

Across 22 studies, recording food, activity and weight was consistently linked with more weight lost.

Burke, Wang & Sevick, J Am Diet Assoc, 2011

What EatNmove does

- ✓ **Your menu is in it.** A, D and E mess at IISc are built in; for any other mess, or your own routine, enter the week's menu once. Tick what you ate and the meal is logged.
- ✓ **A balanced plate** picked from today's menu, ready to log in one go.
- ✓ **Built on Indian vegetarian food:** protein, carbs, fat and fibre, with 12 vitamins and 11 minerals.
- ✓ **Exercise and recovery:** calories for lifting, sport and cardio, and how recovered each muscle is.
- ✓ **Every number shows its working,** with the research papers behind it.
- ✓ **One account for the whole family:** a profile for each person.

SCAN TO START

Free for 45 days, then ₹30 a month

About ₹1 a day. Sign in with Google; it works in the browser and installs like an app. At another mess, or eating at home? Make your own menu for the week in the app and log from it the same way.
